SUMMARY

I have been involved in developing and optimizing responsive web applications, focusing on creating user-friendly interfaces and improving performance. I have solid skills in HTML, CSS, JavaScript, and practical experience with WordPress and Next.js. I enjoy solving problems, working collaboratively, and continuously learning new technologies to enhance the quality of the solutions I contribute to.

EDUCATION

2019 - 2023	FPT POLYTECHNIC
2010 2020	111102112011110

Web Engineer

Relevant Coursework: Web Development, Database, UI/UX Design

SKILLS

Languages	HTML5, CSS3, SCSS, TypeScript, JavaScript, PHP, Liquid
CMS	Wordpress, CraftCMS, Sapo, Wix, Shopify
Frameworks	React/Next, Nuxt, Bootstrap, TailwindCSS
Tools & Softwares	Git, Gitlab, Redux, Docker, Bitbucket, Vercel, Figma, Linux
Libraries	Algolia, JQuery, Splidejs, GreenSock

EXPERIENCES

8/2024 - Present

VietnamBooking

Frontend Developer

- Convert the interface from Figma to a website with pixel-perfect standards and animations.
- Fix bugs and upgrade the flight booking functionality, as well as refine
 features like infinite scrolling, product filtering, sorting and optimizing HTML
 rendering for improved website performance.
- Responsible for training interns in WordPress and addressing issues and requirements on WordPress sites.

- Develop, maintain, and upgrade interfaces and functionalities for compatibility across multiple browsers on CMS platforms: Sapo, WordPress, and Wix.
- Research and apply new technologies to enhance website performance and features.
- Collaborate with SEO and marketing teams to develop features aligned with business strategy, adhering to technical SEO principles for optimized code.
- Write technical documentation to guide optimization and development processes.

8/2021 - 6/2023

Namtech Solutions Pte Ltd.

Frontend Developer

- Executed and upgraded products in an Agile environment, ensuring performance improvements and process optimization.
- Developed and maintained frontend functionalities for the website, ensuring smooth user interfaces compatible across browsers and devices.
- Collaborated with diverse teams to build and troubleshoot projects in ecommerce, media, and fundraising, using WordPress and Nuxt.js.
- Converted designs from Figma into code (PHP, HTML, SCSS, JS) with pixelperfect standards, optimizing for both desktop and mobile.
- Developed custom features based on client requirements, utilizing WordPress techniques to enhance performance and user experience.
- Divided frontend components into smaller parts and worked with the backend team to implement CRUD operations and special features via APIs.
- Shared knowledge and supported new team members, discussing technical issues and contributing ideas to optimize workflows, fostering a strong and effective team environment.

PROJECTS

VietNam Booking

(2024 - Present)

Customer	VietnamBooking
Description	A flight booking website integrated with additional features for hotel booking, tour booking, and visa registration
Team size	8
My position	Frontend Developer
My responsibilities	 Transformed Figma designs into pixel-perfect, responsive website interfaces with integrated animations for an enhanced user experience. Analyzed aviation data from APIs to develop user-facing features such as ticket categorization, filtering, and sorting. Implemented ticket selection functionality based on type (one-way or round-trip). Developed project analysis and directory structure, researched and determined the appropriate technologies and libraries for the project.
Technologies used	Nextjs, Typescript, TailwindCSS, Shadcn, ContextAPI, RestfulAPI, Redux

Finejapan VietNam/USA

(2023 - 08/2024)

Customer	FG Organization
Description	A website for selling and promoting health care products from Japan.
Team size	4
My position	Frontend Developer

My responsibilities	 Develop features aligned with business strategy to increase customer traffic and shopping. Write code to ensure technical SEO compliance. Upgrade functionalities and interfaces using Velo and Liquid. Collaborate with various departments to devise suitable features and strategies. Track customer behavior using GTM and pixels for targeted advertising campaigns. Optimize page loading speed and code structure.
Technologies used	Wordpress, Sapo, Wix, Liquid, Javascript, CSS/SCSS, SEO

Boss Hunting (2022 - 2023)

Customer	Boss Hunting
Description	The "Boss Hunting" website project is dedicated to the luxury lifestyle, offering diverse content from news and reviews to guides and information on luxurious products and services. The website features a modern, intuitive interface, emphasizing user experience with easy access to engaging content and information.
Team size	4
My position	Frontend Developer
My responsibilities	 Convert designs from Figma to code, ensuring pixel-perfect standards and cross-browser compatibility. Process backend data for smooth and efficient integration. Develop core functionalities like infinite scroll, advanced search, and filtering articles by keywords, publication date, and views. Implement a light/dark mode switch and create smooth transition effects. Write SEO-compliant code to optimize for search engines. Manage projects, including task allocation and progress tracking.
Technologies used	Wordpress, PHP, HTML, SCSS, Javascript, JQuery, Ajax, Gsap, Splide, Git, Bitbucket

Safety Path

(2022 - 2023)

Customer	Safety Path
Description	A website selling emergency exit signs, lighting, and road markings
Team size	10
My position	Frontend Developer
My responsibilities	 Analyze and convert the interface from Figma to code, ensuring it meets perfect pixel standards and is compatible across multiple browsers (cross-browser compatibility). Receive and process data from the backend, ensuring smooth and efficient integration. Research and implement search functionality using Algolia, enhancing performance and user experience. Develop login, registration, and password recovery functionalities, improving security and user experience. Utilize Git and Bitbucket for code management in the project.
Technologies used	Wordpress, PHP, Javascript, JQuery, Ajax, Gsap, Algolia, WooCommerce, Git, Bitbucket

Jiffy

(2021 - 2022)

Customer	Jiffy
Description	Supporting you in securely and efficiently filling out your personal information on a form, saving you valuable time for life's pursuits.
Team size	7
My position	Frontend Developer
My responsibilities	 Analyze and convert designs from Figma to code using ElementUI to enhance performance, while modularizing existing large components. Receive and process data from the backend, implement CRUD functionalities, and ensure smooth and efficient integration.

	 Troubleshoot and debug to ensure performance and optimization. Develop custom features tailored to customer requirements.
Technologies used	NuxtJS, Typescript, SCSS, ElementUI, VueX, Git, Bitbucket

HOBBIES

GYM, Badminton, Swimming
